

SIKA SOLUTIONS FOR FACADES 150 LONDON LANDMARKS WITH SIKA INSIDE

BUILDING TRUST

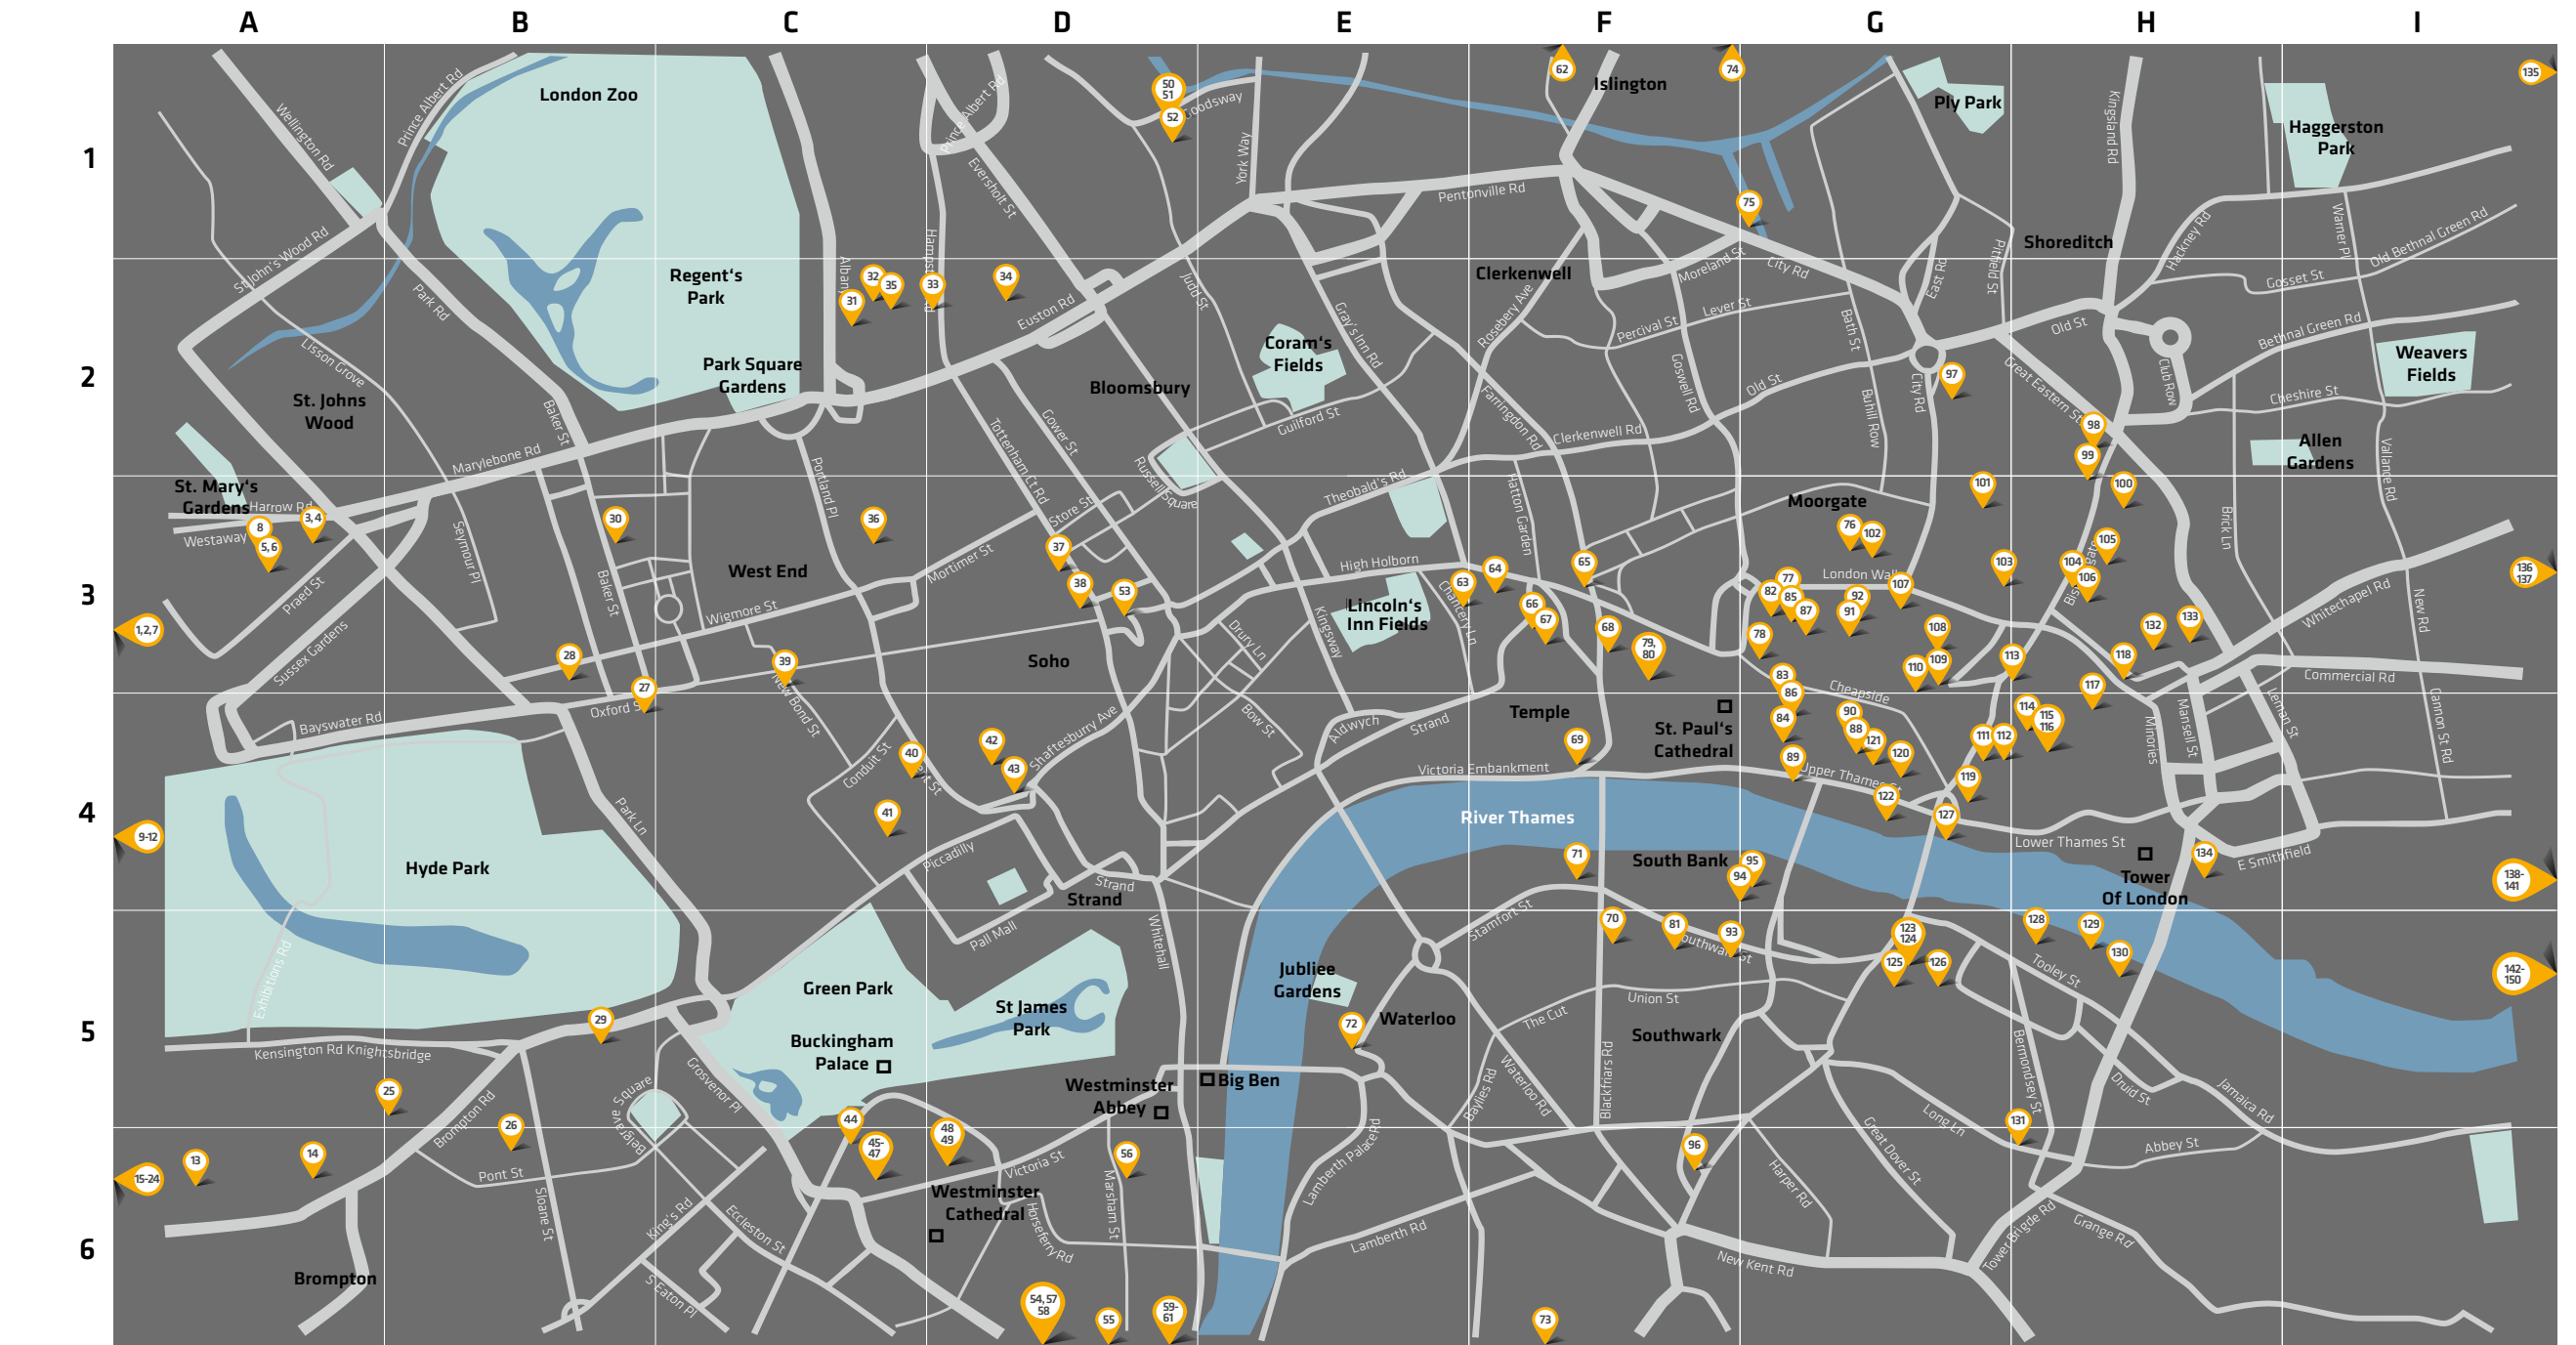

SIKA FACADE SYSTEMS IN LONDON

Sika's facade products have a long history in London. Sikaflex® Polyurethane and SikaMembran® EPDM sheet membranes have been well established in the UK facade market. Nevertheless before 2004 Sika did not play an important role in structural glazing facades. This changed when Sika acquired the engineering silicone business from Wacker-Chemie GmbH in 2004. Wacker's structural glazing adhesive Elastosil® SG-500 had already been used for more than 10 years by the renowned curtain wall fabricators Josef Gartner and Schmidlin AG. Sika then created a unique product portfolio around silicone products, and renamed Elastosil® into Sikasil®. This comprehensive product range together with the competent technical service in the Sika Facade Competence Centre in Switzerland and the strong onsite service in the UK made Sika THE partner for sealing, bonding and water-proofing in London's glass facades.

FACADE BONDING AND SEALING WITH Sikasil® SG AND WS

PROJECT REQUIREMENTS

IN STRUCTURAL SEALANT GLAZING, UV AND WEATHERING RESISTANT SILICONE ADHESIVES TOGETHER WITH COMPATIBLE WEATHER SEALANTS CONSTITUTE STATE OF THE ART TECHNOLOGIES. THE WORLD'S LEADING CURTAIN WALL FABRICATORS REQUESTED THE MOST DURABLE AND RELIABLE PRODUCTS.

SIKA SOLUTION

Sika Facade Competence Centre in Switzerland has tested the adhesion and compatibility of Sikasil® SG-500 (complying with ETAG 002) and Sikasil® WS-605 S (classified ISO 11600 F&G 25 LM) with all materials in contact with silicone products prior to any application in these high-rise buildings. For perfect compatibility Sika even provides the Sika® Spacer Tape HD.

ARGON-FILLED INSULATING GLASS WITH Sikasil® IG-25 HM Plus

PROJECT REQUIREMENTS

IN HIGH-PERFORMANCE ENERGY-SAVING GLASS FACADES, THE INSULATING GLASS UNITS MUST BE ARGON-FILLED. SO FAR THIS WAS A DOMAIN OF CAPPED CURTAIN WALL SYSTEMS AND STANDARD WINDOWS WITH PU AND PS SECONDARY SEALANTS, BECAUSE FOR STRUCTURAL SEALANT GLAZING ONLY SILICONE SEALANTS ARE APPROVED. HOWEVER, SILICONES WITH THEIR HIGH ARGON LOSS RATES WERE REGARDED AS NOT SUITABLE FOR ARGON-FILLED IG UNITS. THIS REQUESTED THE DEVELOPMENT OF A NEW PRODUCT.

SIKA SOLUTION

With the high-modulus silicone secondary sealant, Sikasil® IG-25 HM Plus, Argon loss rates as low as 0.5% per year are achievable, resulting in a service life of the IG unit of at least 30 years. For project No. 83, Sikasil® SG, IG, WS and even Sika® Spacer Tape HD in a particular shade of grey have been created to meet the architect's expectations.

FACADE CLADDING WITH SikaTack® Panel System

**Threshold Residence,
Parsons Green**
Project Participants
Client: Threshold Housing Association
Facade: Cladding UK

PROJECT REQUIREMENTS
FOR THESE PROJECTS, THE CONTRACTORS
REQUIRED A FLAWLESS FACADE
WITHOUT A SINGLE FASTENER TO SPOIL
ITS APPEARANCE.

SIKA SOLUTION
SikaTack® Panel elastic bonding
technology requires neither screws
nor brackets and grants a time-saving
application. Temporarily held in place using
special double-sided adhesive tape,
the panel is bonded firmly but stress-free
to the carrier frame (no buckling) thanks to
SikaTack® Panel adhesive. Vapor proofing
of the ventilated facade is ideally done
with SikaMembran® system.

**RIGHT, Project 148:
Lifelong Learning Centre Barking**

Architect: Allford Hall Monaghan Morris
Facade: Cladding UK

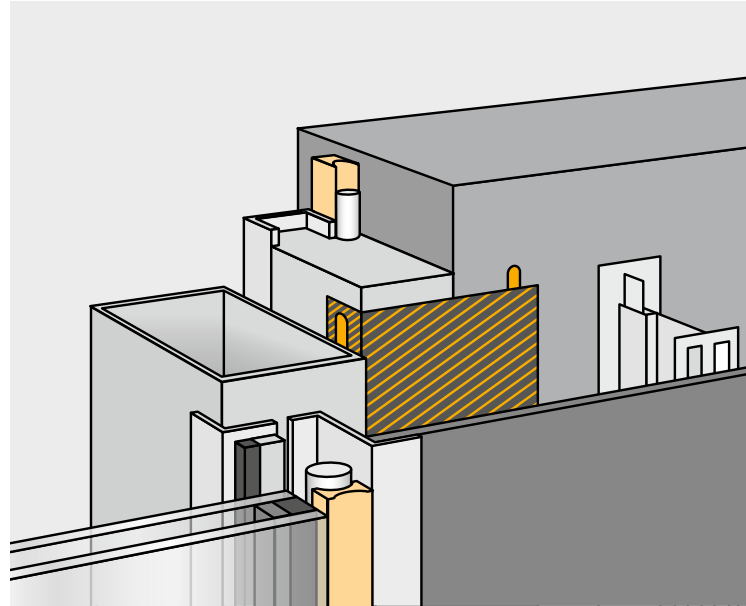

VAPOR PROOFING WITH SikaMembran® System

PROJECT REQUIREMENTS

THE PROJECTS ON THESE TWO PAGES EITHER HAVE A VERY FRAGMENTED FACADE WITH PROTRUSIONS OR CONNECTIONS BETWEEN FACADES WHERE JOINT SEALING WITH WET SEALANTS WAS NOT POSSIBLE AND WIDE GAPS HAD TO BE WATER-/VAPOR-PROOF.

SIKA SOLUTION

The SikaMembran® system consists of a set of EPDM membranes and an adhesive suitable for a durable water-/vapor-proofing in each climate and on many various substrates. The easy and fast application of the thin sheet membranes is outstanding.

GLASS WALL GROUTING WITH SikaForce®-335 GG

128

More London Building 1A
Project Participants
Architect: Foster and Partners
Facade: Permasteelisa UK (2003)

PROJECT REQUIREMENTS

GLASS BALUSTRADES SHOULD BE FIXED TO THE FLOOR WITH THE LOWEST STRESS POSSIBLE ON THE GLASS PANES. BUT MECHANICAL FASTENERS TRANSFER HIGH PUNCTUAL STRESS TO THE GLASS. THICKER GLASS PANELS ARE THE CONSEQUENCE.

SIKA SOLUTION

The bottom glass edge is embedded in the floor with self-levelling, high-strength fast-curing 2-part PU system, SikaForce®-335 GG, resulting in a uniform stress distribution and thus the reduction of high punctual stress. In outdoor applications a bead of Sikasil® WS-605 S protects the PU against UV radiation.

GLOBAL BUT LOCAL PARTNERSHIP

FOR MORE INFORMATION:

www.sika.com/facade

Sika AG, Switzerland, is a globally active specialty chemicals company. Sika supplies the building and construction industry as well as manufacturing industries (automotive, bus, truck, rail, solar and wind power plants, facades). Sika is a leader in processing materials used in sealing, bonding, damping, reinforcing and protecting loadbearing structures. Sika's product lines feature high quality concrete admixtures, specialty mortars, sealants and adhesives, damping and reinforcing materials, structural strengthening systems, industrial flooring as well as roofing and waterproofing systems.

Our most current General Sales Conditions shall apply. Please consult the most current local Product Data Sheet prior to any use.
